Good afternoon, David

During the visit to Roma and Gladstone this week a number of Commissioners requested some additional information to assist in their understanding of the CSG to LNG supply chain. To that end, I provide you the following for distribution to the attendees:

- The presentation material (attached), for information.
- GLNG's youtube clip (below) of the journey of coal seam gas, which assists the viewer understand the origins of CSG, the process of CSG recovery from the coal seam, its processing and transportation.

<https://www.youtube.com/watch?v=V8EHHW-3N5Y>

- An excerpt from the GLNG EIS Project Description (attached) outlining the process flow of the LNG facility. This was from a specific request to assist in providing context to what the visitors saw at the LNG facility on Curtis Island.
- A youtube clip on the introduction to LNG. Although this is not a Santos clip it is very useful in that it shows the viewer the characteristics and properties of LNG when it is exposed to the environment.

<https://www.youtube.com/watch?v=yDO0711I1WU>

I trust the visit was of value and if there is anything else the Commission requires, please don't hesitate to contact Peter or myself.

Regards,

Neale House |
